# *Introduction of Project*

The “Online Vegetable and Fruit Store” has been developed to override the problem prevailing in practicing manual system. This software is supported to eliminate and in some cases reduce the hardships faced by this existing system.

The application is reduced as much as possible to avoid errors while entering the data. It also provides error message while entering invalid data. No formal knowledge is needed for the user to use this system. Thus by this all it proves it is user-friendly. Online Vegetable and Fruit Store, as described above, can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather than concentrate on the record keeping. Thus it will help organization in better utilization of resources.

Every organization, whether big or small, has challenges to overcome and managing the information of Stocks, Vegetables, Customer, Bill, Payment. Every Online Vegetable Store has different Vegetables and fruits needs, therefore we design exclusive employee management systems that are adapted to your managerial requirements.

# *Abstract of Project*

The purpose of “Online Vegetable and Fruit Store” is to automate the existing manual system by the help of computerized equipments and full-fledged computer software, fulfilling their requirements, so that their valuable data/information can be stored for a longer period with easy accessing and manipulation of the same. The required software and hardware are easily available and easy to work with.

Online Vegetable and Fruit Store, as described above.

So, The organization can maintain computerized records without redundant entries. That means that one need not be distracted by information that is not relevant, while being able to reach the information .
